“Most of us need to listen to the music to understand how beautiful it is. But often that’s how we present statistics: we just show the notes, we don’t play the music.”

-Hans Rosling

ggplot2

CREATING A GG PLOT

Complete the template below to build a graph.

```
ggplot (data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<Mappings>),  
stat = <STAT>, position = <POSITION>) +  
<COORDINATE_FUNCTION> +  
<FACET_FUNCTION> +  
<SCALE_FUNCTION> +  
<THEME_FUNCTION>
```

] required
] Not required, sensible defaults supplied

ggplot(data = mpg, aes(x = cty, y = hwy)) Begins a plot that you finish by adding layers to. Add one geom function per layer.

aesthetic mappings **data** **geom**

qplot(x = cty, y = hwy, data = mpg, geom = "point")
Creates a complete plot with given data, geom, and mappings. Supplies many useful defaults.

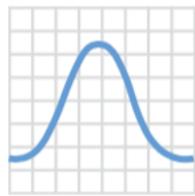

TYPES OF PLOTS

ONE VARIABLE continuous

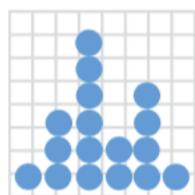

```
c <- ggplot(mpg, aes(hwy)); c2 <- ggplot(mpg)
```

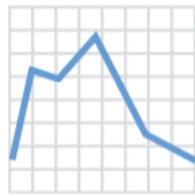

c + geom_area(stat = "bin")
x, y, alpha, color, fill, linetype, size

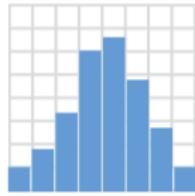

c + geom_density(kernel = "gaussian")
x, y, alpha, color, fill, group, linetype, size, weight

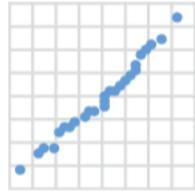

c + geom_dotplot()
x, y, alpha, color, fill

c + geom_freqpoly() x, y, alpha, color, group,
linetype, size

c + geom_histogram(binwidth = 5) x, y, alpha,
color, fill, linetype, size, weight

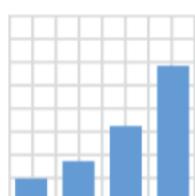

c2 + geom_qq(aes(sample = hwy)) x, y, alpha,
color, fill, linetype, size, weight

discrete

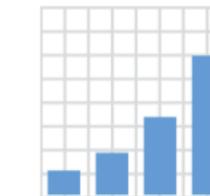

```
d <- ggplot(mpg, aes(fl))
```

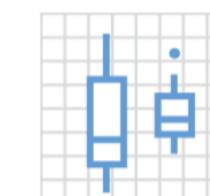

d + geom_bar()
x, alpha, color, fill, linetype, size, weight

discrete x , continuous y

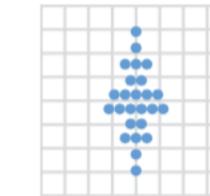

```
f <- ggplot(mpg, aes(class, hwy))
```

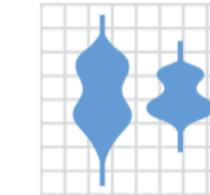

f + geom_col(), x, y, alpha, color, fill, group,
linetype, size

f + geom_boxplot(), x, y, lower, middle, upper,
ymax, ymin, alpha, color, fill, group, linetype,
shape, size, weight

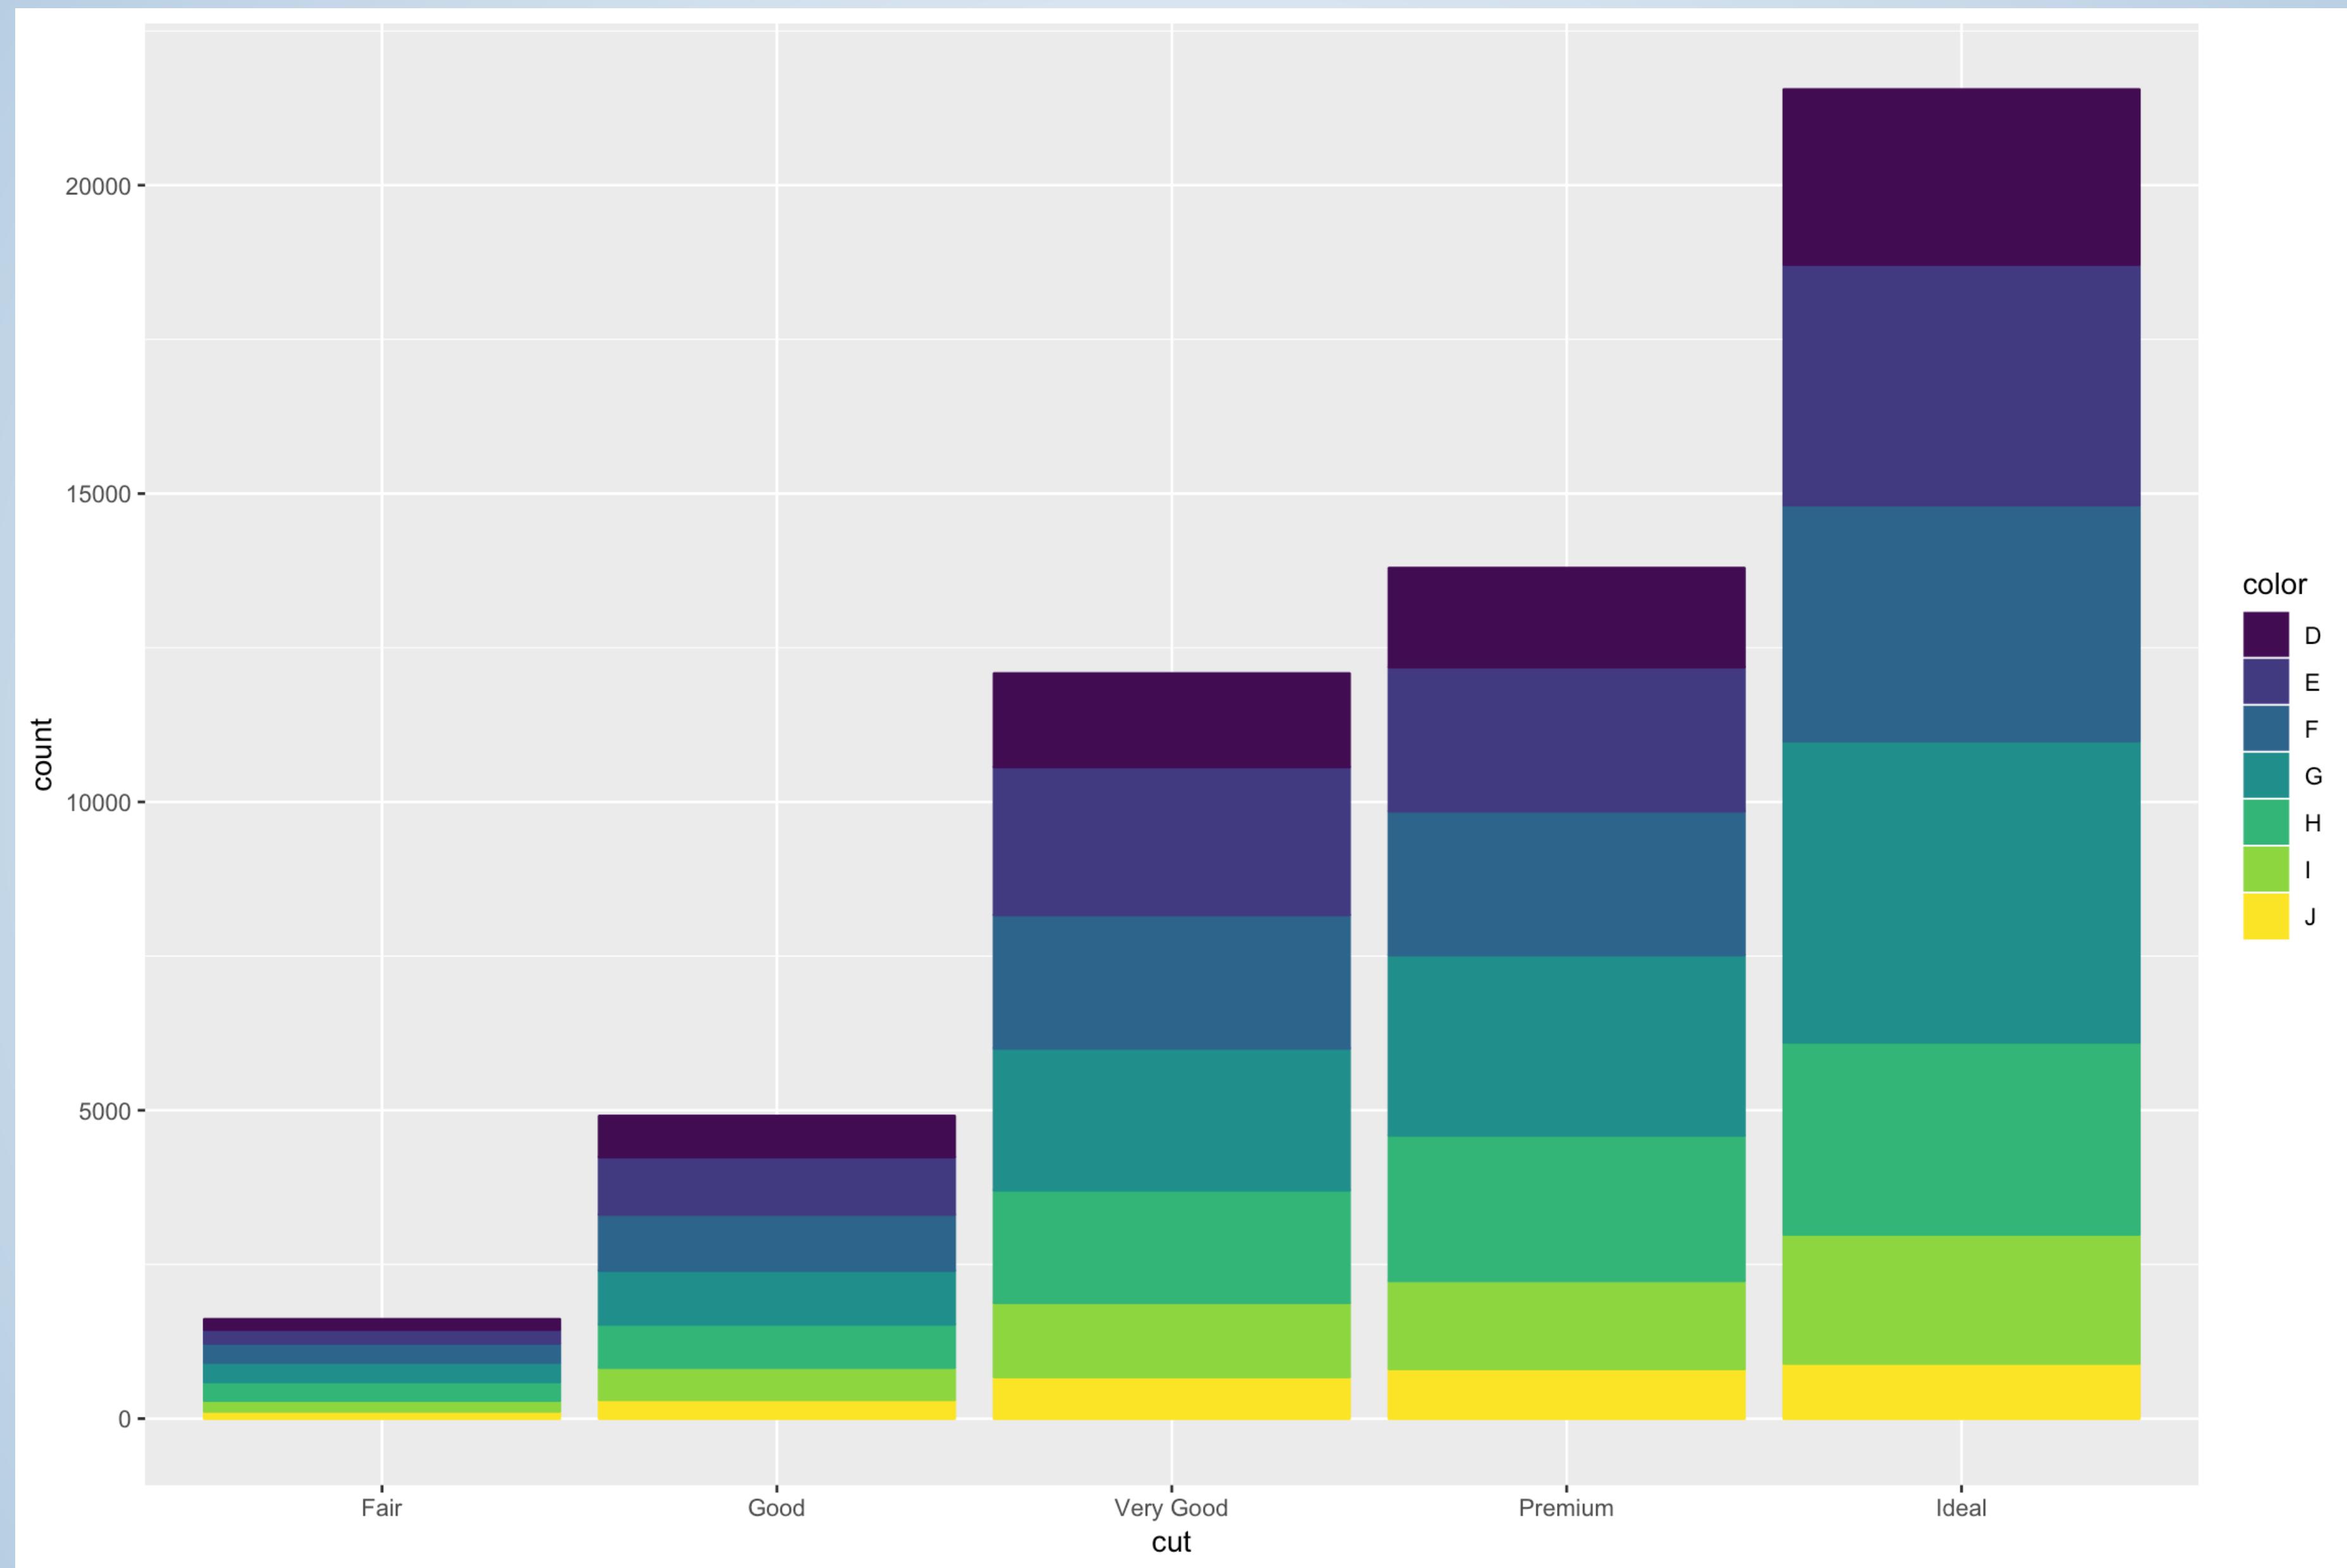

**f + geom_dotplot(binaxis = "y", stackdir =
"center")**, x, y, alpha, color, fill, group

f + geom_violin(scale = "area"), x, y, alpha, color,
fill, group, linetype, size, weight

OTHER FEATURES IN PLOTLY

- Users can save their output by clicking the camera
- You can set tooltip popup type ahead of time
 - ie: `%>% layout(hovermode = 'compare')`
- You can even combine two plots
 - ie: `subplot(plot1, plot2, nrows = 2, shareX = TRUE, heights = c(.7, .3))`
- Plotly will recognize most ggplot arguments, but some don't always come over easily.
